Signal Trader

Introduction

Signal Trader is a leading platform in the automated trading field.

We display a selection of verified and audited systems for you to follow.

These systems trade on a variety of financial instruments-such as Forex, commodities and indices.

Each system is constantly managed and monitored by a professional trader or a team of traders who trade with their own real money.

Signal Trader

How does it work?

Our solution is fully automated.

It is best to activate a free demo on our site and experience it first-hand.

You don't need a broker account to get your Signal Trader demo account.

Click the link below to open your demo account:

<https://room.signaltrader.com/en/open-trial-account>

Once you are logged in, simply choose which of the systems you want to follow and the ratio that best suits your own account size.

All you need to do is set your mirroring ratio for the system or systems you wish to follow.

The demo is in real-time and your trades will appear once your chosen system begins trading.

Signal Trader

What is a mirror ratio?

The mirror ratio is your following proportion of each system's trading.

It is the relative size of the trade that will open on your own account.

- **1:1 (*1) mirroring ratio:**
Your own trades will be the exact same size as the trades made by the system
- **1:2 (*0.5) mirroring ratio:**
Your own trades will be half of the trade size made by the system
- **2:1 (*2) mirroring ratio:**
All of your own trades will be double the trade size made by the system

For example

The followed system performs a trade sized 0.4 lots

When mirroring at 1:2(*0.5) >

A trade sized $0.4/2=0.2$ will be executed in real time (half the size)

When mirroring at 2:1(*2) >

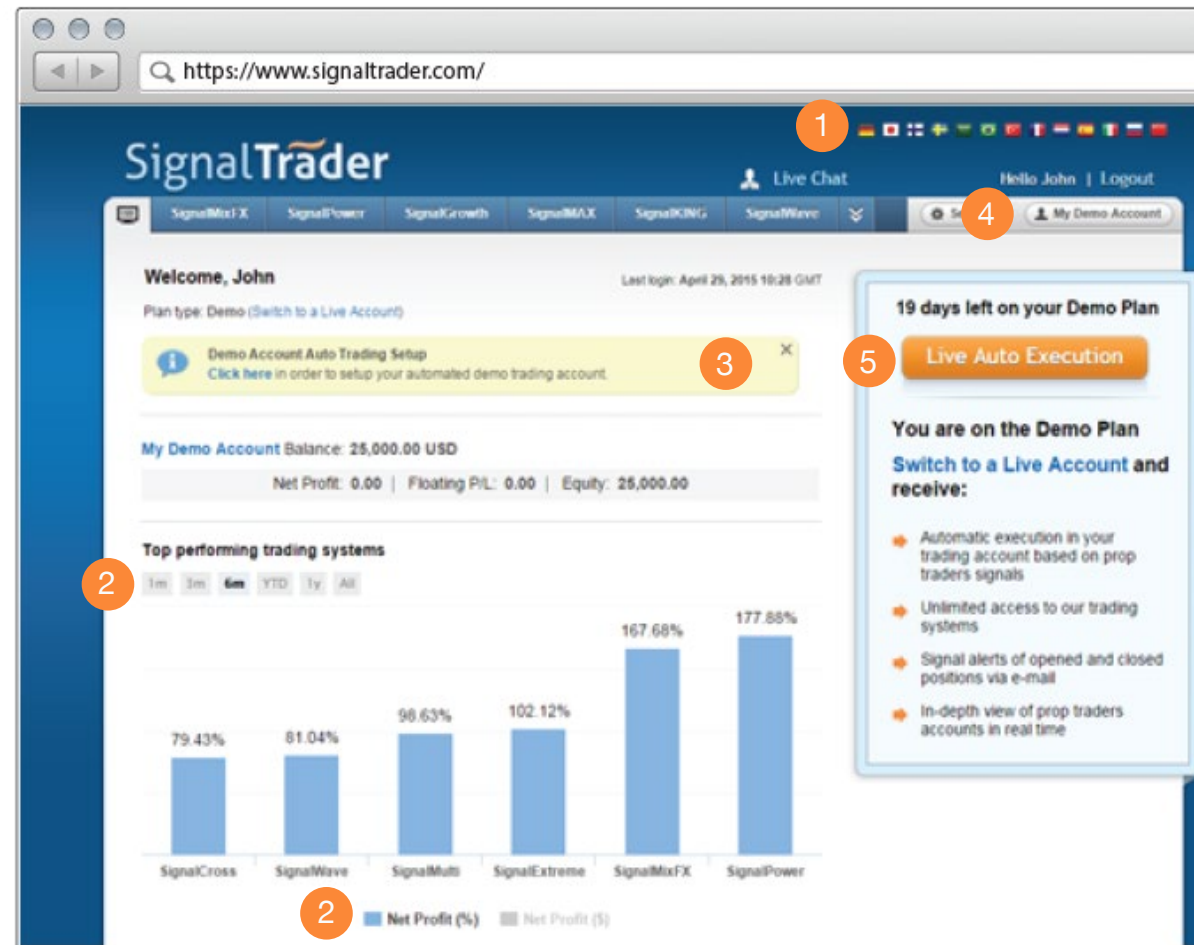

A trade sized $0.4*2 = 0.8$ will be executed in real time (double the size)

Signal Trader

The main dashboard screen

1. Choose your browsing language (press flag)
2. Compare systems results
3. Go to the settings page and choose systems
4. My demo account – this is where you will later on view your own results
5. Live auto execution – open a real broker MT4 account and start using Signal Trader with real money

<https://room.signaltrader.com/account/dashboard>

Signal Trader

The auto-executions settings page

The advantage of a ratio system is that you can follow any of the displayed systems, regardless of your own account balance

Using mirror ratios allows you to adjust your own trades to the size which is appropriate for your own funds.

In the right screenshot, two systems are set:

SignalMixFX is set at 1:5(*0.2) ➤ all future trades will be a fifth of the system's own trade sizes.

SignalPower is set at 1:1(*1) ➤ all future trades will be the same as the system's own trade sizes.

Demo Auto Execution Settings

Below you can setup your auto execution preferences for the signal providers. The system automatically limits the maximum possible exposure for each of the signal providers according to their recommendations and the available funds in your demo trading account. You can allocate up to 200% of your funds in following a basket of signal providers and up to 70% of your funds to follow a single signal provider.

In order to apply changes please make sure to click on the save changes button below.

	Mirror Ratio (My account: Trading system)	Allocated Funds
SignalMixFX	1:5 (x0.20)	\$4000.00
SignalPower	1:1 (x1)	\$3000.00
SignalGrowth	None	
SignalMAX	None	
SignalKING	None	
SignalWave	None	
SignalExtreme	None	
SignalCross	None	
SignalBrave	None	
SignalFIBO	None	
SignalMulti	None	
SignalIndex	None	

Allocated Funds: \$7000.00
Your current Equity: \$25000.00

Mirror Trading

This option allows you to mirror the trading system. You can customize the mirror ratio according to your preferred exposure. A mirror ratio of 1:1 means that each trade in the trading system will be executed with the exact same trade size in your brokerage account. A mirror ratio of 10:1 (x10) means that each trade in the trading system will be executed with a 10 times larger trade size in your brokerage account. A mirror ratio of 1:2 (x0.5) means that each trade in the trading system will be executed with a 0.5 times smaller trade size in your brokerage account. For example: a trade with a 0.20 lots trade size opened in the trading system will be opened with a 0.10 lots trade size in your brokerage account.

- A. Choose systems
- B. Once a choice is made you will see the allocated funds changing
- C. Save your settings

Signal Trader

Confirm Settings

When you press “save changes” a confirmation message box will pop up

After you have confirmed your settings:

When a NEW trade is opened by one of the chosen systems, it will be automatically traded at the ratio you have set for each of the systems

Signal Trader

Monitoring your trading activity

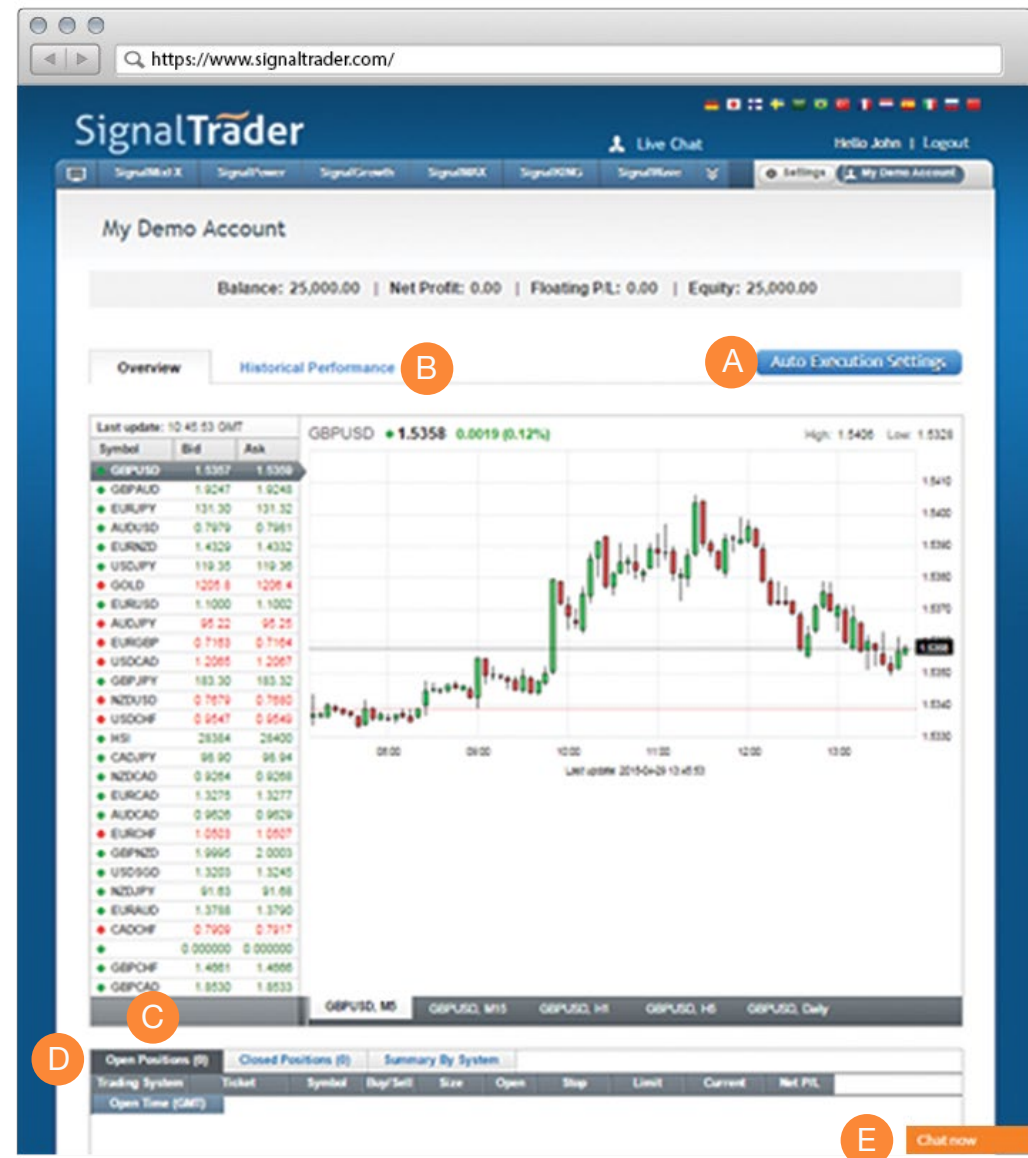

Press “my demo account” at the top right corner of the screen

All of your trade data is live in real time, just be patient and trading will begin soon

Remember, it is fully automated.

- A.** Change systems settings
- B.** Analyze your own historical data
- C.** Live trade data
- D.** When a new trade is traded you will see it here, you will be able to view all open and closed trades
- E.** Chat assistance

Signal Trader

Live trading, opening a live account

Once you are ready to trade live, press “live auto execution” in the main dashboard page and proceed to an account opening application with your chosen broker partner.

If you already have an account with one of our partner brokers – Contact us

- The live trading is fully automated just like the demo, traded on your own linked MT4 account
- No need for a VPS to use our live solution, no need to download any software
- A live user can manually close, modify or partially close any of the open trades using his own MT4 terminal or mobile app
- If you wish to do so, you may also trade manually using your MT4 account
- You will be able to see the system’s name via your mt4 Terminal/App (see below)

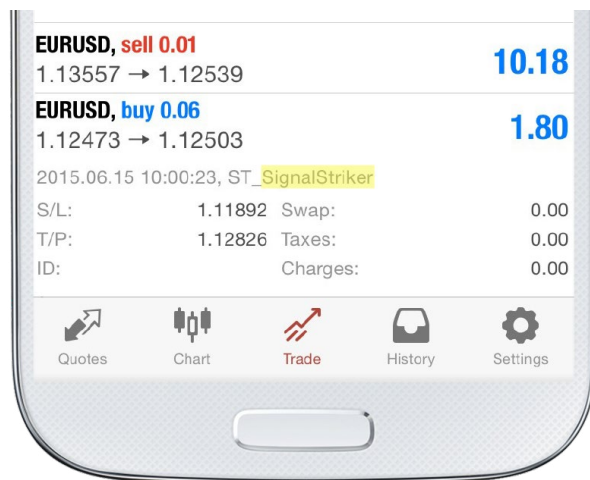

<https://room.signaltrader.com/account/open-live-account>
